

## INFORMATION BULLETIN AND WATER LEVEL FORECASTS ST. LAWRENCE SHIP CHANNEL

Forecasts as of :

22<sup>nd</sup> January, 2024

Water levels are expected to fall in the very short term. Levels should then rise and stabilize in the medium term. A further decrease is expected in the long term, partly due to an anticipated reduction in flows at upstream control structures.

### Forecasted water levels [m above CD]

Stations	3 days	4 to 6 days	7 to 10 days	11 to 14 days	Week 3	Week 4
	(23/01-25/01)	(26/01-28/01)	(29/01-01/02)	(02/02-05/02)	(06/02-12/02)	(13/02-19/02)
<b>Montreal</b> <a href="#">#15520</a>	▼ 0.98	1.34	1.45	1.66	1.81	1.83
	■ 0.61	0.72	0.81	0.74	0.73	0.73
	▲ 0.58	0.67	0.75	0.71	0.73	0.77
<b>Sorel</b> <a href="#">#15930</a>	▼ 1.06	1.38	1.54	1.57	1.79	1.86
	■ 0.71	0.89	1.03	0.86	0.85	0.86
	▲ 0.68	0.85	0.97	0.85	0.84	0.87
<b>Lac Saint-Pierre</b> <a href="#">#15975</a>	▼ 1.02	1.36	1.52	1.47	1.79	1.84
	■ 0.64	0.87	1.03	0.78	0.77	0.78
	▲ 0.60	0.81	0.96	0.75	0.75	0.79
<b>Trois-Rivières</b> <a href="#">#03360</a>	▼ 0.98	1.40	1.50	1.40	1.71	1.74
	■ 0.60	0.83	0.96	0.64	0.62	0.63
	▲ 0.54	0.77	0.89	0.62	0.61	0.62

▼ Minimum water level forecast over the period for which there is a 15% probability of exceedance (PE 15 %).

■ Modeled minimum water level forecast over the period without uncertainties.

▲ Minimum water level forecast over the period for which there is a 85% probability of exceedance (PE 85 %).

□ Recommended value for planning purposes.

### Notes :

- The water levels associated with the probabilities of exceedance shown in the table are calculated from historical errors between forecasted and observed water levels. As a guide, there is a probability of about 15% that future water levels will be below the forecasted water levels for which there is a 85% probability of exceedance.
- The data in this bulletin, released Monday and Thursday of each week, is produced by the Hydraulic Engineering Sector of the Canadian Coast Guard, Headquarters, to help Commercial Mariners plan their activities for the next 4 weeks.
- The Canadian Coast Guard makes no warranty on the information contained in this bulletin and assumes no responsibility for any loss or damage incurred as a result of the use of this information.
- Hydro-meteorological factors can influence future water levels. The master of the vessel or the officer on duty is responsible for the safety of the vessel at all times.
- It is the responsibility of the maritime industry to maintain a sufficient safety margin in relation to these forecasts.
- The presence of ice could induce large variations in water levels. The water levels forecast in this bulletin do not take into account the potential variations resulting from the presence and possible management of this ice.
